

Environmental Statement

All of the vegetable fibres used in our platform brushes are harvested and the gathering and processing of these fibres helps to support many local communities in third world countries.

The manufacturer has an FSC (Forest Stewardship Council) Chain of Custody Accreditation (TT/COC/001562) for wooden brush backs for platform brushes and other wooden products. This means that the raw material to produce these wooden parts can be traced back to a registered plantation, where the timber is felled and replanted under licence. The non-FSC timber used by the company comes from managed forests, or suppliers with other sustainable timber schemes.

Broom handles are now generally produced in Brazil, but there is a continual source of concern over the depletion of the South American Rain Forests. As an environmentally friendly alternative, our company is delighted to be able to offer broom handles made from bamboo, which is a plant, not a tree. The bamboo handles are only available with threads, but we have greatly increased the range of threaded brushes in this catalogue.

The company strives to use the minimum amount of packaging materials, and complies with the Packaging Waste regulations.
